Quotations of previous delegates:

"I thoroughly enjoyed the course run by Prof. Steier & Dr. Mirfendereski. The three parts to the surgical bone management were very beneficial, relevant and progressed appropriately. The science and the lectures was bang up-to-date and really complimented the practical component. The hands-on aspect were extremely good and very enjoyable, as was discussion amongst tutors, company reps and other attendees. I highly recommend this course for those who wish to take their implantology knowledge to the next level."

Dr. Melissa Godderd

"Very informative and well backed-up by research. New techniques were very well explained and practical sessions were structured as to give confidence in using instruments in your practice. Always backed up by science. Also well supported by the industry and suppliers."

Dr. Steve Malherbe

"I thoroughly enjoyed this fantastic six-day course. It has equipped me with the knowledge to perform advanced bone management procedures safely and confidently. I found the presentations highly informative and I enjoyed the inevitable (sometimes heated!) discussions that ensued. It was a privilege to learn from such a knowledgeable "wet hand" tutor. The depth and range of Prof Steier's knowledge in all aspects of surgery, prosthetics patient management (and even endo!) was outstanding. Above all, I found his enthusiasm very inspiring. The practical sessions were useful and I found the clinical observation sessions very beneficial. It was good to see that even highly skilled and experienced clinicians sometimes struggle! As there is currently a distinct lack of similar courses in the UK, I would consider this course essential for any dentist aspiring to venture into the mine-strewn field of advanced implantology."

Dr. Malan Cloete

International Bone Management® Network

Prof. Dr. Liviu Steier

Initial and further
education program
2008

Bone Management®
Competence Center

Course Number One

Oktober 17-18, 2008

09.00 o'clock registration
09.30 - 17.00 o'clock course

€ 989,-
including lunch and refreshments

Part one

1. Bone physiology
2. Guided Bone Regeneration with and without barriers
3. Osseo conductive vs. osseo inductive
4. Bone growth enhancing procedures (Platelet rich plasma, and others...)
5. Requirements for optimal grafts
Soft tissue management

Part two

1. Minimal invasive tooth extraction
2. Benex®-Control
Preparing the extraction site for:
immediate implant placement / delayed implant placement.
3. Adequate alveolar management procedures (from disinfections to implant site development)
4. Planning for the immediate implant placement (from model based to CT based)

Part three

1. Live surgery
2. Discussing cases (attendees are encouraged to bring own cases for discussion and advise)

Course Number Two

November 14-15, 2008

09.00 o'clock registration
09.30 - 17.00 o'clock course

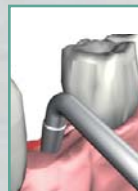

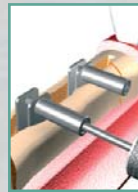

€ 989,-
including lunch and refreshments

Part one

1. Safe, predictable and simple autogenous bone replacing approaches from press fit to screwed techniques:
 - Transfer-Control
 - Transfer-Ring-Control
 - Screw System
2. 3Dimensional Bone Management®
 - Crest-Control
 - Split-Control
 - Horizontal-Control
 - Vertical-Control
3. Soft tissue manipulation
 - Meitac-Membrane fixation

Part two

1. Live surgery
2. Discussing cases (attendees are encouraged to bring own cases for discussion and advise)

Course Number Three

November 28-29, 2008

09.00 o'clock registration
09.30 - 17.00 o'clock course

€ 989,-
including lunch and refreshments

Part one

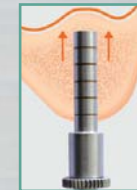

1. Grafting posterior maxilla
2. Physiology of the sinus
3. Sinus floor manipulation
4. Sinus elevation and implant placement
5. Conventional sinus elevation

Part two

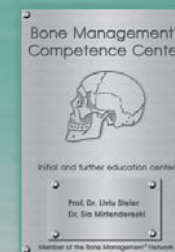

1. Sinus floor manipulation procedures:
 - Lift-Control
2. Balloon assisted sinus elevation:
 - Lateral approach
 - Crestal approach

Part three

1. Live surgery
2. Discussing cases (attendees are encouraged to bring own cases for discussion, advise or treatment under supervision)
